Students interested in attending pharmacy school can choose from three options. One is to complete pre-pharmacy requirements in two academic years.

Another option is to complete in four academic years a King degree of their choice along with the necessary pre-pharmacy requirements.

A third option is to complete a Pharmacy Dual Degree curriculum. The student receives a BS degree in Biology after completing three academic years at King and the first academic year of an accredited professional school of pharmacy. A description of the dual degree curriculum is listed under Biology in the Academic Departments section of this catalog.
